

THE LAUN-DRY-ETTE

CLOTHES
WASHED AND DRIED
IN THE SAME TUB
WITHOUT A WRINGER

PHANTOM VIEW
TUB LOWERED—READY TO WASH

The LAUN-DRY-ETTE washes the clothes by the well known Vacuum Cup Process. These cups are suspended on a shaft which works up and down while the inner tub containing the clothes is slowly revolving. On the down stroke the sudsy water is forced through the fabric, the bottom of the tub being perforated permitting the water to pass through and under the clothes, while on the up stroke the soapy water is sucked back again through the mesh of the clothes.

THE LAUN-DRY-ETTE

THE ONLY ELECTRIC WASHING MACHINE MADE
THAT DOES NOT REQUIRE A WRINGER.

An unusual pleasure is afforded the housewife by the LAUN-DRY-ETTE as it not only washes the most delicate fabrics without the slightest injury, and without the touch of a human hand; but dries them so that 75 per cent of the average wash can be placed immediately upon the ironing board.

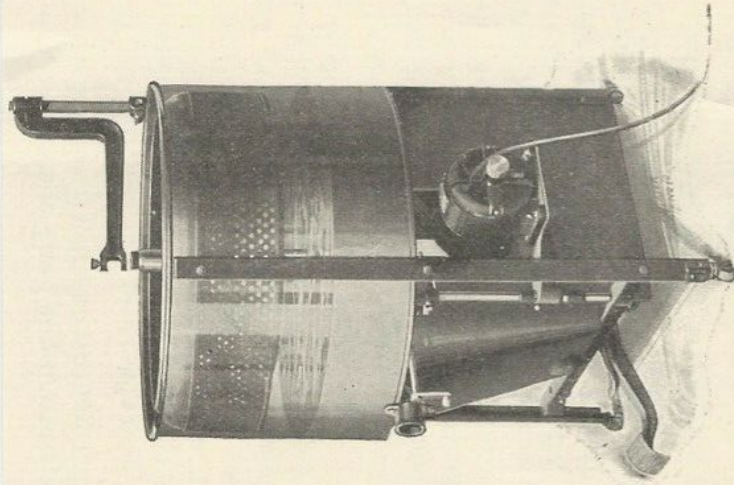

Imagine, if you can, the comfort of feeling that regardless of the weather—yes, or the Laundress—that the washing and ironing can all be finished and put away in half the time that it takes other electric washers.

The operation of the machine is a marvel of simplicity—impossible to make a mistake, or cause injury in its operation. The power is for driving both the washer and dryer is controlled by the same lever, the change in position of the inside tub causing the machine to perform the character of service desired.

All moving parts that might cause injury are underneath and protected by a metal shield.

Impossible to overload machine or motor or burn out connections.

Electric shock is impossible. Motor is insulated from balance of the machine.

PHANTOM VIEW
TUB RAISED—READY TO DRY

The LAUN-DRY-ETTE is the only washing machine on the market that does not require a wringer. It dries the clothes without the use of either a hand or power wringer, eliminating for all time the many disadvantages attendant upon the use of this device. By pressing the foot pedal down it raises the inside tub which automatically starts it revolving, forcing the water through the perforations into the outside tub. The clothes come from the dryer unwrinkled, but-tons intact, color unaffected, with just enough moisture evenly distributed to make ironing a pleasure.

No dirt can escape The Laun-dry-ette, every thread is saturated with the washing solution.

When the washing process is completed the washing bells are taken off by removing the small pin which is fastened to the top of the arm, the large foot pedal is then pressed down as far as it will go and the inside tub containing the clothes is then in proper position to dry.

After the clothes are rinsed, either in the rinsing tub or in the dryer by means of a hose connected with the water faucet, the small hand lever in front of the tub which controls the motor is turned to the left, this starts the inner tub revolving rapidly. The whirling motion causes the water to be thrown from the clothes, the perforations at the same time permitting the air to be sucked through the clothes rapidly airing and drying them.

The LAUN-DRY-ETTE washes and dries the bulkiest comforts and the most delicate laces, leaving the cotton in the comforts as fluffy as new and the laces without a thread impaired.

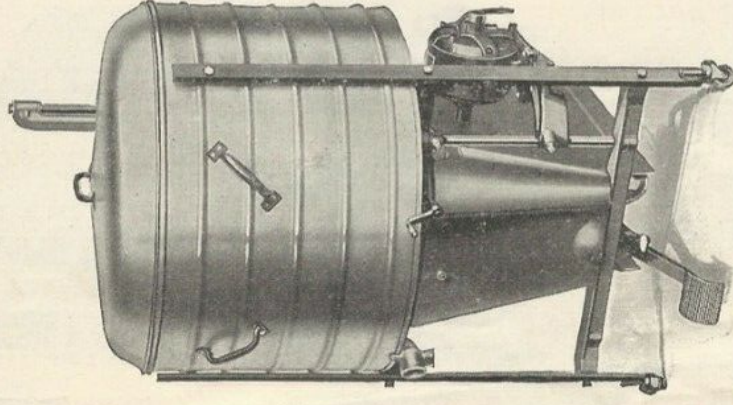

MANUFACTURED BY
**THE HOME SPECIALTY
MFG. COMPANY**
CLEVELAND, OHIO

No Rubbing
No Skinned Knuckles
No Lifting
No Backache
No Wringing
No Pinched Fingers
No Buttons to Sew on
